

# 1200Z INDUSTRIAL STORMWATER PERMIT

# FACT SHEET

## TECHNOLOGY-BASED EFFLUENT LIMITS (TBELs)

### What are TBELs?

TBELs are the Narrative Technology-Based Effluent Limits listed in the 1200Z Industrial Stormwater Permit. The permit registrant must meet the TBEL limits listed in the permit. The following is a summary of the TBELs. For full TBELs, please see Schedule A within the 1200Z permit, pages 10–12.

### Summary of TBELs Within 1200Z Permit

- Minimize exposure of all outdoor processes, equipment and material storage, disposal, and maintenance activities to rain, snow, snowmelt, and runoff. Anything stored outside must be covered and/or contained so that stormwater runoff does not become polluted.
- Employ best management practices (BMPs), containment measures, and proper disposal for all oil, grease, and waste chemicals.
- Employ erosion, sediment, and debris control measures to ensure it is not discharged into stormwater.
- Implement good housekeeping measures and spill prevention and response measures when needed.
- Develop and maintain employee orientation and conduct all required training that is specific to your site on components of the 1200Z permit and the City's Stormwater Pollution Control Plan (SWPCP).
- Follow all applicable sector-specific requirements for Industrial Activities on Air Transportation Facilities, which can be found in Schedule E, Sector S, pages 101–105 of the permit.
